SUMMARY

Software Engineer with 6+ years of experience building scalable systems with: microservices, agentic AI applications, and cloud-native platforms. Most comfortable working across the full lifecycle from architecture to deployment.

TECHNICAL SKILLS

Languages	Java, Python, SQL, Golang
Backend	Spring Boot, FastAPI, Microservices, REST, gRPC, Protobuf, Temporal, JPA/Hibernate
AI/ML & Data	LangGraph, Azure AI Foundry, Agentic AI, RAG, Kafka, CDC
Databases	PostgreSQL, MongoDB, Redis, Azure Cosmos DB
Cloud & DevOps	Azure, AWS, Docker, Kubernetes, Helm, Terraform, Git, CI/CD, GitHub Actions

WORK EXPERIENCE

A.P. Moller - Maersk Oct 2024 – Present
Software Engineer *Bangalore, India*

- Engineered an agentic AI system that parses and classifies 1,500 documents/day with 90% accuracy and cuts processing costs by 30% using Python, FastAPI, LangGraph.
- Integrated end-to-end LLM observability, enabling trace-level debugging of agentic workflows, prompt versioning, and automated evaluation of parsing accuracy across document types.
- Developed rate management system processing 500,000 transactions/day across 7 microservices using Java, Spring Boot, Temporal, PostgreSQL.
- Cut operational cost by 30% using Kafka CDC event streaming, enabling real-time data propagation and eliminating DB throttling.
- Delivered multi-region Kubernetes deployment strategy for Maersk Developer Platform, for HA/DR and zero-downtime releases using Java, Spring Boot, Kubernetes.

IBM Software Labs Oct 2022 – Oct 2024
Software Engineer *Kochi, India*

- Accelerated services for Db2 and Watsonx.data, reducing time by 60% through Kafka partitioning and horizontally scaled workers.
- Reduced costs by 70% on security scanning by migrating services from paid pipelines to shared Kubernetes cluster.
- Shipped high-availability multi-cloud provisioning APIs for Watsonx.data using Golang, gRPC/Protobuf, Helm.
- Built analytics APIs with sub-500ms latency, powering dashboards that tracked vulnerability trends across releases using Python, FastAPI, PostgreSQL.
- Instrumented centralized observability using ELK and Prometheus for microservices logging and monitoring.

TCS (Marks & Spencer) Sep 2020 – Oct 2022
Software Engineer *Kochi, India*

- Migrated APIs from on-prem Kubernetes to Azure AKS, cutting infrastructure costs by 40% and operational overhead by 25%.
- Built and operated microservices for ETL processing of 1 million IoT-driven inventory records per day using Java, Spring Boot, MongoDB.
- Delivered inventory reconciliation, validating ETL accuracy, enabling early detection of data drift and load failures.
- Standardized API management using Apigee with centralized authentication, policy enforcement, and traffic controls.
- Automated New Relic alerting with Terraform and PagerDuty integration, reducing MTTR by 40%.

EDUCATION

Bachelor of Technology in Computer Science and Engineering 2016 – 2020
APJ Abdul Kalam Technological University *Kochi, India*

PERSONAL PROJECTS

Breaking the Lines – *Football fan community platform* breakingthelines.com

- Co-built entire platform from scratch in a 2-person team using Golang, PostgreSQL, AWS S3, Redis, shipping 3 core services over a Consul/Envoy service mesh with Centrifugo for real-time match updates and notifications, now serving 1M+ hits/month.

AI Portfolio Chatbot naijith.dev

- Built interactive portfolio with client-side RAG chat – loads a quantized MiniLM-L6 model (q8) via Hugging Face Transformers.js, embeds queries in-browser, and retrieves context from pre-computed embeddings using cosine similarity, with zero API costs.

AWARDS

Star Award & Spot Award – A.P. Moller - Maersk 2025
Received Star Award for owning and delivering the Scheduled Rate feature end-to-end, increasing CSAT to 95%.

Promotion & Recognition – IBM Software Labs 2023
Promoted for contributions to cloud provisioning and security automation initiatives.
